codeReview

- positioning for deeply indented dtds (ie not in iv_mainPane)
- I noticed one oddity when using the +/-: I added 2 list items to listfragment and i only filled in linktitle and description. i checked it in, then checked it back out. now when i add more list items using +/-, it only adds linktitle and description, not the 4 fields that should be there. do you know what might be going on? i can show you on Monday if this description is cryptic...
- CheckoutForView (like checkout without lock)
 implement checkoutForView which is a GET without lock token
 flag on fragment, iv_readOnly = false;
 from either active list or search can do a getForView
 put into edit window (right side) without being able to modify
 disable the checkin button for read only fragments
 title bar include READ only "-- Read only --"
 [weird cases:
 [1 viewing fragment, now want to check it out, can't easily do it]
 [2 if viewing fragment, then search and do a checkout, it will just go
 to existing fragment, which is still in read mode]
 [3 test... with new icons]
- Logout... prompt to unlock all checked out fragments or keep for editing choose which to save locally offline editing: dtd, save xml file, multimedia file, locktoken on login fill in right side with locally saved fragments
 unlock unwanted fragments.
 save dtd & xml & multimedia files
- offline editing without checking into server. use local dtds.
- stale sessionID put up dialog for every SC_UNAUTHORIZED
- show media file for browseLocal (eg, image) on browseLocal entry
- publish info has 3 children: stylesheet is not properly indented
- copy and create
- search nresults print, results in message pane
- captitalize font (and smaller) for table headings...
- (tag1 | tag2)* method hasQualifier doesnt find model with () groupings
- chuck button for audio fragment, checkOutForView
- change login init file name ie "franklin_init.xml" -> "/login"
